Getting Started

WARNING

See the Important Safety and Product Information guide in the product box for product warnings and other important information.

Stereo Controls

Dial

- Turn to adjust the volume.
- When adjusting the volume, press to switch between zones.
- Turn or press to open the CONTROL screen to select and group stereos (Control Screen, page 2).
- When in a menu, press to select the highlighted option.
- Press and hold to activate certain functions such as opening the radio presets or muting all connected stereos from the mute screen (Muting all Connected Stereos, page 3).
- Turn to move through the menus or adjust a setting.
- When in a menu, press to select the highlighted option.
- Press and hold to turn off the stereo.
- Press to turn on the stereo.
- Press to mute the audio.
- Press to return to the previous screen from the menu.
- Press to turn on the stereo.
- Press to mute the audio.
- Press and hold to turn off the stereo.
- Press to open the menu.
- Press to return to the previous screen from the menu.
- Press and hold to turn off the stereo.
- Press to open the menu.
- Press to return to the previous screen from the menu.
- Press and hold to exit the menu.

Tip: You can turn the dial to browse, and press the dial to select the source.

Press to change the source.

Enter Text

1 In a field that allows you to enter text, select to erase the existing characters.
2 If necessary, select ← or → to use numerals or letters.
3 If necessary, select ↑ to change the case.
4 Turn the dial to choose a character, and press the dial to select it.
5 Select ✓ to save the new text.

Using the Dial to Select Items

You can use the dial to highlight and select items on the screen.

- Turn the dial to highlight an item on the screen.
- Press the dial to select the highlighted option.

Stereo Screen

The information displayed on the screen varies depending on the source selected. This example shows a track playing on a device connected using Bluetooth® wireless technology.

- Press to pause or resume media playback.
- AM/FM source:
  - Press to cycle through the tuning modes (Auto, Manual, and Preset).
  - Press and hold to save the selected station as a preset.
- SiriusXM source:
  - Press and hold to switch between Replay Mode and Live Mode.
  - In Live Mode, press to cycle through the tuning modes (Manual, Category, and Preset).
  - In Replay Mode, press to pause and play.
- DAB source: press to scan for DAB stations.

- Press to skip to the next track or station, when using an applicable source.
- Press and hold to fast-forward, when using an applicable source.
- AM/FM:
  - Press to tune to the next station or preset.
  - Press and hold for faster tuning (Manual mode only).
- SiriusXM source:
  - In Live Mode, press to tune to the next station or preset.
  - In Live Mode, press and hold for faster tuning, in Manual mode only.
  - In Replay Mode, press to skip to the next track, if applicable.
  - In Replay Mode, press and hold to fast-forward the current track, if applicable.
- DAB source:
  - Press to advance to the next DAB station in the ensemble. When you reach the end of the current ensemble, the stereo automatically changes to the first available station in the next ensemble.
  - Press and hold to change the ensemble.
Control Screen
From the CONTROL screen, you can adjust the volume of any zone on the network, create and edit stereo groups, and choose a stereo to control.

![Control Screen Diagram]

1. Name of the stereo or zone on the network currently being controlled by this device
2. Name and active source of a stereo on the network
3. Indicates that additional zones or stereos can be seen when you scroll through the list
4. Select to add or remove stereos from a group (Creating a Group, page 9)
5. Available speaker zones for network stereos
   If you scroll down, additional zones are shown under the names of other stereos on the network
6. Home zone indicator (Setting the Home Zone, page 2)

Naming the Device
You should enter a unique name for this device so you can easily identify it when viewing devices on the Fusion PartyBus™ network.

NOTE: You should provide unique names to all of the devices and zones on the network to avoid confusion when grouping, controlling, and setting up stereos and zones. You should also turn off zones that are not in use (Speaker Zone Settings, page 10).

For further customization, you can provide unique names for the sources on each stereo and turn off unused sources (General Settings, page 10).

1. Select ➕ > SETTINGS.
2. Select DEVICE NAME, and enter a unique name for the device.

Setting the Home Zone
The home zone is the speaker zone that you adjust by default when you turn the dial.

1. Select ➕ > SETTINGS.
2. Select ZONE > ASSIGN HOME ZONE.
3. Select a zone.

Temporarily Selecting a Stereo to Control
If you have more than one compatible stereo on the Fusion PartyBus network, you can temporarily select one of them to control using this stereo.

NOTE: You can also combine compatible stereos on the network into groups for synchronized playback (Creating a Group, page 9).

1. Press the dial to open the CONTROL screen.
2. Turn the dial, and select the stereo or zone you want to control using this device.

   The name of the stereo or zone appears on the status bar, and you can change sources, settings, and adjust the volume for the selected stereo or zone.

   After about 30 seconds of inactivity, the stereo reverts to local control or to the stereo associated with the home zone.

Selecting a Source
1. Press ☰.
2. Turn the dial to highlight a source.

   NOTE: If the device part of a group on the Fusion PartyBus network, continue turning the dial to access the sources on other devices in group (Creating a Group, page 9).

A zone stereo, such as the Apollo SRX400, can create or join a group to control and play sources from other stereos, but it cannot share its sources with the group.

3. Press the dial to select the source.

Adjusting the Backlight and Dial Brightness
NOTE: If you connected the dim wire on the wiring harness to the boat's illumination wire, the backlight and dial dim automatically when the boat lights are on. This may affect how you adjust the brightness setting.

1. Select ➕ > SETTINGS > BRIGHTNESS.
2. Adjust the brightness level.

Temporarily Selecting a Stereo to Control
If you have more than one compatible stereo on the Fusion PartyBus network, you can temporarily select one of them to control using this stereo.

NOTE: You can also combine compatible stereos on the network into groups for synchronized playback (Creating a Group, page 9).

1. Press the dial to open the CONTROL screen.
2. Turn the dial, and select the stereo or zone you want to control using this device.

   The name of the stereo or zone appears on the status bar, and you can change sources, settings, and adjust the volume for the selected stereo or zone.

   After about 30 seconds of inactivity, the stereo reverts to local control or to the stereo associated with the home zone.

Creating or Editing a Group
Before you can create a group, you must connect multiple compatible stereos to the Fusion PartyBus network. See the installation instructions provided with your stereo for installing and configuring the network.

You can combine compatible stereos on the network into groups. Grouped stereos can share available sources and control media playback on all of the stereos in the group, which allows for a synchronized audio experience across the vessel. You can quickly create, edit, and break up groups as needed from any compatible stereo or remote control on the network.

NOTE: You can adjust the volume of any zone on any compatible stereo on the network, regardless of whether or not those stereos are in the group.

A zone stereo, such as the Apollo SRX400, can create or join a group to control and play sources from other stereos, but it cannot share its sources with the group.

For additional considerations when sharing sources, see the owner's manual.

1. Press the dial to open the CONTROL screen.
2. Turn the dial, and select EDIT GROUP under the name of the stereo you want to be the primary stereo in the group or under the name of an existing group.
3. Select the stereos you want to add to or remove from the group.
4. Select GROUP or UNGROUP.
Enabling Standby Mode
By default, when you turn off the ignition (when connected) or hold \( \\text{Hold} \) the device turns off, and you must press \( \\text{Hold} \) to turn it on again. You can set the stereo to enter a standby mode when you turn off the ignition (when connected) or hold \( \\text{Hold} \). When you turn on the ignition or press \( \\text{Hold} \) again, it takes less than the typical 30 seconds to turn on than with standby mode disabled. You can enable standby mode on the device so you can turn it on using another device on the network instead of pressing \( \\text{Hold} \). NOTE: When the device is off, it continues to draw approximately 35 mA from the battery. When you enable standby mode, the device draws more current because it is listening for a power-on signal over the network. When the device is off with standby mode enabled, it continues to draw approximately 50 mA.

Select \( \\text{Setting} > \text{Settings} > \text{Power Options} > \text{Standby Mode}. \)

The stereo now enters standby mode when you hold \( \\text{Hold} \) or turn off the ignition. You can turn it on again from the CONTROL screen on any device on the network.

Audio Control

Adjusting the Volume
You can control the volume of any zone on any stereo connected to the Fusion PartyBus network.

1 Turn the dial to adjust the volume.
2 If necessary, press the dial to switch between zones.
   TIP: You can select ALL to adjust the volume for all zones of all grouped stereos at the same time.

Muting all Connected Stereos
You can quickly mute the audio from this stereo or from all stereos connected to the Fusion PartyBus network (Fusion PartyBus Networking, page 9).

1 From any source, press \( \\text{Hold} \).
   The mute symbol appears and audio from this stereo is silenced.
   NOTE: If the stereo is part of a group, the audio from all grouped stereos is silenced.
2 Press and hold the dial to select MUTE SYSTEM.
   Audio from all connected stereos is silenced.
3 Press and hold the dial to select UNMUTE SYSTEM.
   Audio is restored to all connected stereos.

Adjusting the Subwoofer Level
You can adjust the subwoofer level for each zone.

1 Press the dial to open the CONTROL screen.
2 Turn the dial to select a zone.
3 Press and hold the dial.
   The SUB LEVEL adjustment for the zone appears.
4 Turn the dial to adjust the subwoofer level.

Synchronizing the Source and Zone Volume Levels
You can synchronize the volume levels on one or all zones with some source devices, such as a Bluetooth source.

1 Select \( \\text{Setting} > \text{Settings} > \text{Zone} > \text{Phone Volume Zone Sync}. \)
2 Select a zone or ALL.
When you adjust the volume on the source device, the volume on the selected zone is also adjusted.

Adjusting the Gain for an Auxiliary Device
You can adjust the gain for a connected auxiliary device to achieve a volume level similar to that of other media sources. You can adjust the gain in 1 dB increments. You can also adjust the gain for digital sources using an optical audio connection.

1 Select an auxiliary source.
2 Select an option:
   • To increase the gain, select \( \text{Up} \).
   • To decrease the gain, select \( \text{Down} \).
   NOTE: To achieve the best audio quality when using a portable media player with headphone output, it may be necessary to adjust the volume control on the media player, instead of adjusting the gain.

Speaker Zones
You can group speakers in one area into a speaker zone. This enables you to control the audio level of the zones individually. For example, you could make the audio quieter in the cabin and louder on deck.
You can set the balance, volume limit, tone, subwoofer level, subwoofer frequency, and name for each zone, and configure other zone-specific settings (Speaker Zone Settings, page 10).

DSP Settings
This stereo features digital signal processing (DSP). You can select pre-configured DSP settings for Fusion® speakers and amplifiers to optimize audio reproduction in their installed locations.
All DSP settings are configured using the Fusion-Link™ remote control app (Fusion-Link Wireless Remote Control App, page 12).

Configuring the DSP Settings
You must download and install the Fusion-Link remote control app on your compatible Apple® or Android™ device before you can configure the DSP settings (Fusion-Link Wireless Remote Control App, page 12).
You can configure the DSP settings to optimize the sound on each zone with the installed speakers, amplifiers, and environment.

1 From the settings menu on your Apple or Android device, connect to the stereo using Bluetooth technology, or connect to the same wireless network as the stereo.
2 Open the Fusion-Link remote control app on your compatible Apple or Android device.
3 If necessary, select the stereo you want to configure.
4 Select SETTINGS.
5 If necessary, select the MUSIC tab.
6 Select Zone.
7 Select a zone.
8 Select DSP SETTINGS.
9 Configure the DSP settings as needed, depending on the models of Fusion speakers and amplifiers connected to the zone.
10 Repeat these steps for each zone.
11 After you have finished configuring the DSP settings for all zones, select an option:
   • On an Apple device, select SETTINGS > Zone > SETTINGS > SEND DSP SETTINGS.
   • On an Android device, select SETTINGS > Zone > SEND DSP SETTINGS.
Media Player Connection

Always disconnect your media player from the stereo when not in use and do not leave it in your vessel. This helps reduce the risk of theft and damage from extreme temperatures. Do not remove the media player or use your stereo in a distracting manner while operating the vessel. Check and obey all marine laws in association with use.

The stereo accepts a variety of media players, including smartphones and other mobile devices. You can connect a compatible media player using a Bluetooth wireless connection or a USB connection to the USB port. The stereo can play music from Universal Plug and Play (UPnP) devices, such as a Network Attached Storage (NAS) device connected to the same network. The stereo can play media from a compatible Apple device connected to the same network using the AirPlay feature.

Bluetooth Device Playback
You can pair the stereo to up to eight Bluetooth media devices. You can control the playback using the stereo controls on all Bluetooth devices, and on some devices you can browse the music collection from the menu on the stereo. On Bluetooth devices that do not support media browsing, you should select the song or playlist on the media device.

The availability of song information such as song title, artist name, track duration, and album art depends on the capability of the media player and music application.

Connecting a Compatible Bluetooth Device
You can play media from a compatible Bluetooth device using the Bluetooth wireless connection.

You can control the music playback with the media app on a Bluetooth device or using the Fusion-Link remote control app (Fusion-Link Wireless Remote Control App, page 12).

1. Select the BT source.
2. Select BT > DISCOVERABLE to make the stereo visible to your compatible Bluetooth device.
3. Enable Bluetooth on your compatible Bluetooth device.
4. Bring the compatible Bluetooth device within 10 m (33 ft.) of the stereo.
5. On your compatible Bluetooth device, search for Bluetooth devices.
6. On your compatible Bluetooth device, select the stereo from the list of detected devices.
7. On your compatible Bluetooth device, follow the on-screen instructions to pair and connect to the discovered stereo.
   When pairing, your compatible Bluetooth device may ask you to confirm a code on the stereo. The stereo does not display a code, but it does connect correctly when you confirm the message on the Bluetooth device.
8. If your compatible Bluetooth device does not immediately connect to the stereo, repeat steps 1 through 7.
   The DISCOVERABLE setting is disabled automatically after two minutes.

NOTE: On some Bluetooth devices, adjusting the volume on the device affects the volume level on the stereo.

Bluetooth Range Information
The stereo and Bluetooth wireless devices have a range of 10 m (33 ft.). For optimal performance, the Bluetooth wireless device should also have a clear line of sight to the stereo.

Selecting a Different Bluetooth Device
When you have more than one Bluetooth device paired to the stereo, you can select a different source when needed. You can pair the stereo with up to eight Bluetooth devices.
1. With the BT source selected, select audio source.
2. Select a Bluetooth device.

Bluetooth Source Menu and Settings
With the BT source selected, select .

NOTE: The options in this menu vary based on the connected device.

DISCOVERABLE: Allows the stereo to be visible to Bluetooth devices. You can turn off this setting to prevent possible interruption to audio after pairing a Bluetooth device to the stereo.

REMOVE DEVICE: Removes the Bluetooth device from the stereo. To listen to audio from this Bluetooth device again, you must pair the device again.

REPEAT OFF: Sets the repeat mode for the current selection. You can repeat the current selection by selecting the REPEAT ONE option. You can repeat all items in the selection by selecting the REPEAT ALLOption.

SHUFFLE OFF: Shuffles the tracks in the folder, album, or playlist.

PLAYLIST: Displays the playlists on the device.

ARTISTS: Displays the artists on the device.

ALBUMS: Displays the albums on the device.

GENRES: Displays the genres of music on the device.

SONGS: Displays the songs on the device.

USB Device Playback
You can connect various USB media players, USB flash drives, and smartphones to the stereo. How you access the USB source depends on the type of connected media player or smartphone.

<table>
<thead>
<tr>
<th>Media Player</th>
<th>Source Selections</th>
</tr>
</thead>
<tbody>
<tr>
<td>Android device</td>

<tr>
<td>Apple device</td>
<td>iPod</td>
</tr>
<tr>
<td>USB flash drive</td>
<td>USB</td>
</tr>
<tr>
<td>MP3 media player (as a mass-storage device)</td>
<td>USB</td>
</tr>
</tbody>
</table>

NOTE: If your MP3 media player does not support mass-storage when connected using USB, you must connect it to the stereo as an auxiliary device (Connecting an Auxiliary Device, page 6).

You can control the playback using the stereo controls on all USB devices, and on some devices you can browse the music collection from the menu on the stereo. On USB devices that do not support media browsing, you should select the song or playlist on the media device.

The availability of song information such as song title, artist name, and track duration depends on the capability of the media player and music application.

USB Device Compatibility
You can use a USB flash drive or the USB cable included with your media player to connect a media player or mobile device to the USB port.

The stereo is compatible with iAP2 Apple devices such as the iPhone Xs Max, iPhone Xs, iPhone XR, iPhone X, iPhone 8 Plus, iPhone 8, iPhone 7 Plus, iPhone 7, iPhone SE, iPhone 6s.
Plus, iPhone 6s, iPhone 6 Plus, iPhone 6, iPhone 5s, and iPod touch™ (6th generation).

The stereo is compatible with Android devices that support MTP mode.

The stereo is compatible with media players and other USB mass storage devices, including USB flash drives. Music on USB drives must meet these conditions:
- The music files must be formatted as MP3, AAC (.m4a), or FLAC, files.
- If you connect a portable hard drive, you must connect it to an external power source. The USB port on this stereo cannot provide power for a portable hard drive.
- The USB mass storage device must be formatted using one of the following systems:
  - Microsoft®: NTFS, VFAT, FAT1, MSDOS
  - Apple: HFS, HFSPLUS
  - Linux: EXT2, EXT3, EX4

Connecting a USB Device
You can connect a USB device to the USB port on the stereo.
1. Locate the USB port on the back of the stereo.
2. Connect the USB device to the USB port.
3. Select the USB source.

Controlling Music Playback on a USB Source
1. Connect a compatible USB device to the stereo.
2. Select the appropriate source.
3. If necessary, select to browse the music on the USB device.
4. If necessary, launch a music application on the USB device, and begin playback.

You can use the stereo controls to select, play, pause, and skip tracks.

Controlling Music Playback on a Connected Android Device, USB Flash Drive, or Media Player
1. Connect a compatible Android device, USB flash drive, or media player to the stereo.
2. Select the appropriate source on the stereo.
3. Select .
4. If necessary, select the name of the device or USB drive to view the file structure.
5. Select a song to begin music playback.

You can use the stereo controls to select, play, pause, and skip tracks.

Controlling Music Playback on a Connected Apple Device
1. Connect a compatible Apple smartphone or media player to the stereo using USB or Bluetooth (if available).
2. Select the appropriate source on the stereo.
3. Launch a music application on the connected device, and begin playback.

You can use the music application or the stereo controls to browse the music library and to select, play, pause, and skip tracks.

USB Source Menu and Settings
With a USB source selected, select .

1 FAT includes most types of FAT file systems except exFAT.
Connecting a UPnP Device
You must connect your stereo to a network to play media from a UPnP device, such as a NAS device.
1. Connect your UPnP device to the same network as the stereo, referring to the instructions provided with your UPnP device and router if necessary.
2. Select the UPnP source on the stereo (Selecting a Source, page 2).

You can browse and play media from the UPnP device.

Connecting an Auxiliary Device
You can connect various auxiliary devices to the stereo. These devices have either RCA connectors, a line output, or a headphone output jack.
1. Locate the auxiliary connectors on the wiring harness.
2. If necessary, connect an RCA-to-3.5 mm adapter cable to the auxiliary device.
3. Connect the auxiliary device to the AUX IN RCA connectors on the wiring harness.
4. Select the Aux source.

Optical Audio Connection
You can connect devices with an optical audio output to the stereo using an optical audio cable. Televisions, DVD players, CD players, and other devices may supply digital optical audio output.

This stereo supports PCM audio only. You may have to change the settings on your device to output PCM audio.

NOTE: Because streaming audio over the Fusion PartyBus network introduces a slight delay, streaming content from a television or DVD player may not be ideal. You can disable Optical as a streaming source in the settings, if needed (General Settings, page 10).

SiriusXM Satellite Radio
Only SiriusXM brings you more of what you love to listen to, all in one place. Get over 140 channels, including commercial-free music plus the best sports, news, talk, comedy and entertainment. Welcome to the world of satellite radio. A SiriusXM Vehicle Tuner and subscription are required. For more information, go to www.siriusxm.com.

Setting the Tuner Region for the SiriusXM Source
You must set the stereo to use the USA tuner region before you can listen to SiriusXM Satellite Radio.
1. Select SETTINGS.
2. Select TUNER REGION USA.

Locating the SiriusXM Radio ID
You must have the radio ID of your SiriusXM Connect Tuner before you can activate your SiriusXM subscription. You can locate the SiriusXM Radio ID on the back of the SiriusXM Connect Tuner or its packaging, or by tuning your stereo to channel 0.

With the SiriusXM source selected, select SETTINGS > ALL CHANNELS > 000 RADIO ID.
The SiriusXM Radio ID does not include the letters I, O, S, or F.

Activating a SiriusXM Subscription
1. With the SiriusXM source selected, tune to channel 1.
   You should be able to hear the preview channel. If not, check the SiriusXM Connect Tuner and antenna installation and connections, and try again.
2. Tune to channel 0 to locate the Radio ID.
3. Contact SiriusXM listener care by phone at (866) 635-2349 or go to www.siriusxm.com/activatenow to subscribe in the United States. Contact SiriusXM by phone at (877) 438-9677 or go to www.siriusxm.ca/activatexm to subscribe in Canada.
4. Provide the Radio ID.
   The activation process usually takes 10 to 15 minutes, but can take up to an hour. For the SiriusXM Connect Tuner to receive the activation message, it must be turned on and receiving the SiriusXM signal.
5. If the service is not activated within the hour, go to http://care.siriusxm.com/refresh or contact SiriusXM Listener Care by phone at 1-866-635-2349.

Selecting a Category
You can control which categories of channels are available when using the CATEGORY tuning method.
1. With the SiriusXM source selected, select SETTINGS > CATEGORY.
2. Select a category.

Using Replay Mode
You can use Replay Mode to control playback of a SiriusXM broadcast.

NOTE: The device enables Replay Mode automatically when playing saved preset channels.
1. If necessary, hold SOURCE to enable Replay Mode.
   A progress bar appears at the bottom of the screen.
2 Select an option:
   • Press to pause and resume playback.
   • Press or to skip backward or forward in increments.
   • Hold or to rewind or fast-forward the track.
   • Hold to exit Replay Mode.

Alerts

NOTE: The Artist, Song, and Game Alerts feature is compatible with the SXV300 tuner (sold separately). Other tuners are compatible, but may limit the features. Review the user manual supplied with your SiriusXM tuner to learn about features available with your tuner module.

Adding an Artist or Song Alert

You can set alerts for artists and songs so that when a particular song or a song from a particular artist begins to play on any music channel, you can quickly tune to that channel.

1 While a particular song or a song from a particular artist is playing, select > > ADD ALERT > SAVE ARTIST/SONG.
2 Select the song or the artist.

Adding Teams for Game Alerts

You can set alerts for sports teams so that when a game featuring a saved team begins to play on any sports channel, you can quickly tune to that channel.

NOTE: A Game Alert is different than a SportsFlash™ alert. A Game Alert lets you know when a game begins, while a SportsFlash alert lets you know when an exciting play occurs during a game.

1 Select > > ADD ALERT > GAME ALERT TEAMS.
2 Select a sports league.
3 Select a team to fill the check box and add it to the list of Game Alerts.
4 Repeat steps 2 and 3 for each team you want to add to the list of Game Alerts.

Adding Teams from a Live Game

While listening to a game, you can quickly add a team playing to your list of Game Alert teams.

1 While listening to a game on a channel, select > > ADD ALERT > SAVE TEAM.
   A list of teams playing in the current game appears.
2 Select the team or teams to add to your list of Game Alert teams.

Viewing Active Alerts

You can review active Artist, Song, and Game Alerts.

1 Select > > ACTIVE ALERTS.
2 Select a category.

Managing Alerts

You can manage your saved alerts to select which ones you want to receive. You can delete saved alerts you do not want.

1 Select > > SiriusXM SETTINGS > ALERT MANAGEMENT.
2 Select an option:
   • To delete all saved alerts for songs, artists, or teams, select DELETE BY TYPES, and select a type.
   • To delete saved alerts for specific artists, select DELETE ARTISTS, and select the artists.
   • To delete saved alerts for specific songs, select DELETE SONGS, and select the songs.
   • To delete saved alerts for specific teams, select DELETE TEAMS, and select the teams.

TuneMix™ Feature

NOTE: The TuneMix feature is compatible with the SXV300 tuner (sold separately). Other tuners are compatible, but may limit the features. Review the user manual supplied with your SiriusXM tuner to learn about features available with your tuner module.

Creating and Customizing a TuneMix Collection

You can create up to 10 unique TuneMix collections on the stereo.

NOTE: A TuneMix collection must include at least two of your favorite SiriusXM music channels.

1 Select > > SiriusXM SETTINGS > TUNEMIX SETUP.
2 Select a TuneMix collection.
3 Select a channel to fill the check box and add it to the TuneMix collection.
4 After you are finished customizing the TuneMix collection, select .
5 Repeat steps 2 through 4 for each TuneMix collection you want to customize.

Starting and Stopping a TuneMix Collection

Before you can start playing a TuneMix collection, you must create one (Creating and Customizing a TuneMix Collection, page 7).

The TuneMix feature enables you to mix your favorite music channels to create a custom listening experience.

1 Select > > TUNEMIX.
2 Select a TuneMix collection.
   The stereo begins playing the TuneMix collection.
3 To stop playing a TuneMix collection, select > > CHANNELS, and select a channel.
   The stereo stops playing the TuneMix collection and begins playing the selected channel.

SportsFlash Feature

The SportsFlash feature alerts you to key plays from your favorite teams during a live game. When an exciting play happens, a SportsFlash alert appears, and you can tune to the broadcast and hear the play. When the SportsFlash alert ends, you can choose to return to the previous channel, or remain tuned to the game.

To receive SportsFlash alerts, your subscription package must include play-by-play sports channels for the sports leagues you want to include in the alerts.

You can enable, disable, or delete SportsFlash alerts that you have added (Managing Alerts, page 7).

NOTE: A SportsFlash is different than a Game Alert. A SportsFlash alert lets you know when an exciting play occurs during a game, while a Game Alert lets you know when a game begins.

NOTE: The SportsFlash feature is compatible with the SXV300 tuner (sold separately). Other tuners are compatible but may limit the features. Review the user manual supplied with your SiriusXM tuner to learn about features available with your tuner module.
Adding Teams to Receive SportsFlash Alerts
1. Select 📅 > SPORTSFLASH > TEAM SELECT.
2. Select a sports league.
3. Select a team to fill the check box and add a SportsFlash alert.
4. Repeat steps 2 and 3 for each team you want to add to the list of SportsFlash alerts.

Changing SportsFlash Team Priority
If more than one team for which you have set up SportsFlash alerts are playing at the same time, you can adjust the team priority to hear SportsFlash alerts from your preferred team first.
1. Select 📅 > SPORTSFLASH > TEAM PRIORITIES.
   - A list of your selected SportsFlash teams appears, in order of priority.
2. Select a team to move it up one priority level in the list.
3. Repeat the previous step with each team you want to reorder until the priority list is ordered the way you prefer.

Enabling the TuneStart™ Feature
When you enable the TuneStart feature and tune to a preset channel, the stereo starts the current song from the beginning of the song instead of starting it from the point it is at in the live broadcast.

NOTE: The TuneStart feature is available when tuning to preset channels only. The TuneStart feature is compatible with the SXV300 tuner (sold separately). Other tuners are compatible but may limit the features. Review the user manual supplied with your SiriusXM tuner to learn about features available with your tuning module.
   - If necessary, select 📅 > SiriusXM SETTINGS > TUNESTART.

When the TuneStart feature starts a song from the beginning, a progress bar appears and you can control the track using the same controls as Replay Mode (Using Replay Mode, page 6).

Parental Controls
The parental control feature allows you to limit access to any SiriusXM channels, including those with mature content. When the parental control feature is enabled, you must enter a passcode to tune to the locked channels. You can also change the 4-digit passcode.

Unlocking the Parental Controls
You can unlock the parental controls to access locked channels.
1. With the SiriusXM source selected, select 📅 > PARENTAL.
2. Select the UNLOCK check box.
3. Enter the passcode.
   - TIP: The default passcode is 0000.

The parental controls remain unlocked until you turn off the vehicle or until you lock them again.

Locking Channels
1. With the SiriusXM source selected, select 📅 > PARENTAL.
2. Select the UNLOCK check box.
3. Enter the passcode.
   - TIP: The default passcode is 0000.
4. Select LOCK/UNLOCK.
   - A list of available channels appears.
5. Select one or more channels to lock, and select 📅.
6. Clear the UNLOCK check box to lock the parental controls.

You cannot access the locked channels while the parental controls are locked. You must unlock the parental controls to tune the locked channels.

Clearing All Locked Channels
1. With the SiriusXM source selected, select 📅 > PARENTAL > UNLOCK.
2. Enter the passcode.
3. Select 📅 > PARENTAL > CLEAR ALL LOCKED.

Changing the Parental Control Passcode
1. With the SiriusXM source selected, select 📅 > PARENTAL > UNLOCK.
2. Enter the passcode.
3. Select 📅 > PARENTAL > CHANGE PIN.
4. Follow the on-screen instructions.

SiriusXM Troubleshooting

</tbody>
</table>
Clearing SiriusXM Data
You can clear all entered SiriusXM user information, such as favorite teams and alerts.

Use the FACTORY RESET option in the settings menu to reset the stereo (Update Options, page 12).

NOTE: The factory reset setting resets all data in the stereo, including AM and FM presets, zone settings, etc. in addition to clearing all SiriusXM user information.

DAB Playback
When you connect a compatible Digital Audio Broadcasting (DAB) module and antenna, such as the MS-DAB100A to the Apollo RA670 stereo, you can tune in to and play DAB stations. DAB broadcasts are not available in all regions. When the stereo is not set to a compatible region, the DAB source is not available.

Setting the Tuner Region
You must select the region you are in to receive DAB stations properly.
1 Select ➔ > SETTINGS > TUNER REGION.
2 Select the region you are in.

Scanning for DAB Stations
Before you can scan for DAB stations, you must connect a compatible DAB module and antenna (not included) to the stereo. Because DAB signals are broadcast in select countries only, you must also set the tuner region to a location where DAB signals are broadcast.
1 Select the DAB source.
2 Select to scan for available DAB stations.

When scanning is complete, the first available station in the first ensemble found begins playing.

NOTE: After the first scan is complete, you can select again to re-scan for DAB stations. When the re-scan is complete, the system starts playing the first station in the ensemble you were listening to when you started the re-scan.

Changing DAB Stations
1 Select the DAB source.
2 If necessary, select to scan for local DAB stations.
3 Select or to change the station.

When you reach the end of the current ensemble, the stereo automatically changes to the first available station in the next ensemble.

TIP: You can hold or to change the ensemble.

Selecting a DAB Station from a List
1 Select the DAB source.
2 If necessary, select to scan for local DAB stations.
3 Select ➔ > BROWSE > STATIONS.
4 Select a station from the list.

Selecting a DAB Station from a Category
1 Select the DAB source.
2 If necessary, select to scan for local DAB stations.
3 Select ➔ > BROWSE > CATEGORIES.
4 Select a category from the list.
5 Select a station from the list.

Presets
You can save your favorite AM stations and FM stations as presets for easy access.

You can save your favorite SiriusXM channels if you are connected to an optional SiriusXM tuner and antenna.

You can save your favorite DAB stations if you are connected to an optional DAB module and antenna.

Saving a Station as a Preset
1 With an applicable source selected, tune the stereo to a station or a channel.
2 Press and hold ․ ․ .

Selecting a Preset from a List
1 With an applicable source selected, press and hold the dial.
2 Select a preset.

Removing Presets
1 With an applicable source selected, press and hold the dial.
2 Select .
3 Select each preset you want to remove.
4 When you are finished removing presets, select .

Fusion PartyBus Networking
The Fusion PartyBus networking feature allows you to connect multiple compatible stereos together on a network, using a combination of wired or wireless connections.

The Apollo RA670 stereo does not have built-in Wi-Fi® technology. To use the wireless functions of the network, you must connect the stereo to the network using a wired Ethernet connection.

You can group a compatible stereo, such as the Apollo RA670 stereo, with other compatible stereos connected to the network. Grouped stereos can share available sources and control media playback on all of the stereos in the group, which allows for a synchronized audio experience across the vessel. You can quickly create, edit, and break up groups as needed from any compatible stereo or remote control on the network.

You can use compatible stereos and remote controls, whether they are grouped or not, to adjust the volume of the available speaker zones for any stereo on the network.

You should refer to the installation instructions provided with your stereo when constructing the Fusion PartyBus network.

Creating a Group
Before you can create a group, you must connect multiple compatible stereos to the Fusion PartyBus network. See the installation instructions provided with your stereo for information about installing and configuring the network.
1 Press the dial to open the CONTROL screen.
2 Turn the dial and select **EDIT GROUP** under the name of the stereo you want to be the primary stereo in the group.
3 Select the stereos you want to add to the group.
4 Select **GROUP**.

When the stereo is in a group, you can control the volume of all zones in a group at once from the **CONTROL** screen. From the source screen, you can select the source of any stereo in the group, except the Apollo SRX400 stereo and any sources that are not enabled on the Fusion PartyBus network (**General Settings**, page 10).

**Editing a Group**
1 Press the dial to open the **CONTROL** screen.
2 Turn the dial, and select **EDIT GROUP**.
3 Select the devices you want to add to or remove from the group.
4 Select **GROUP** or **UNGROUP**.

**Leaving a Group**
You can leave the Fusion PartyBus group to play local sources on the stereo.
1 Press the dial to open the **CONTROL** screen.
2 Turn the dial, and select **EDIT GROUP** under the name of the group that you want to leave.
3 Select the devices you want to remove from the group.
4 Select **UNGROUP**.

**Network Source Considerations**
When selecting sources to play over the network, you should observe these considerations.
- A zone stereo, such as the Apollo SRX400, can create or join a group to control and play sources from other stereos, but it cannot share its sources with the group.
- You cannot share an AirPlay source with grouped stereos. Using AirPlay 2 software, you can play content on multiple stereos on the network, but the stereos must not be grouped.
- You can disable sharing on most sources by changing the PARTYBUS ENABLED setting for the source. When disabled, the source cannot be selected from a grouped stereo (**General Settings**, page 10).
- When audio sources are shared over a data network, there is a slight delay in the synchronized audio that may be noticeable if you are also using an external audio source.
  - If you have a television with an Optical Out connection to the stereo and you continue to use the television speakers, there will be a delay between the audio from the television speakers and the optical audio synchronized on the grouped stereos.
  - If you synchronize a radio station and tune that same radio station on a non-networked stereo, there will be a delay between the audio from the non-networked stereo and the audio from the radio station synchronized on the grouped stereos.
  - You can remove this delay by changing the PARTYBUS ENABLED setting for the source, but the source cannot be shared with grouped stereos.

**General Settings**

**NOTE:** When the stereo is in a group, not all settings and options are available.
Select **> SETTINGS**.

**NOTE:** When a check box is filled, the option is on. When the check box is clear, the option is off.

**ZONE:** Enables you to configure the speaker zones (**Speaker Zone Settings**, page 10).

**BRIGHTNESS:** Adjusts the screen and dial backlight brightness (**Adjusting the Backlight and Dial Brightness**, page 2).

**TUNER REGION:** Sets the region used by the FM, AM, DAB, and SiriusXM sources.

**LANGUAGE:** Sets the language on the device.

**DEVICE NAME:** Sets a name for this stereo.

**TELEMUTE:** Sets the behavior of the mute function when the device is connected to a hands-free mobile phone. When a call is received, the device can either mute the audio or broadcast the call through the Aux input. See your hands-free kit instructions.

**SEARCHING:** Enables Fusion Alpha Search Technology (FAST), which allows you to quickly search for tracks by letter or number. You can select a number to enable the FAST menu if your music device contains more than the selected number of items.

**AirPlay PASSWORD:** Sets a password that a user must enter when connecting to the stereo using the AirPlay feature (**Setting an AirPlay Password**, page 6).

**POWER OPTIONS:** Adjusts power settings, such as the power-save mode (**Power Options**, page 11).

**SOURCE:** Allows you to enable sources, enable the Fusion PartyBus network for some sources, and name the sources. You may want to disable streaming for some sources, such as AM, because streaming over the Fusion PartyBus network introduces a small audio lag that is not desirable in some situations.

**NETWORK:** Enables you to configure the Fusion PartyBus network settings (**Network Settings**, page 11).

**UPDATE:** Updates the stereo or connected devices (**Update Options**, page 12).

**ABOUT:** Shows the software version information for the stereo.

**Speaker Zone Settings**

**Disabling the Internal Amplifiers**
If you do not connect speakers directly to zones 1 and 2, you can disable the internal amplifiers to reduce power consumption.
1 Select **> SETTINGS > ZONE**.
2 Select **INTERNAL AMP ON** to clear the check box.

**Disabling a Zone**
You can disable an unused zone and remove it from the audio level pages. When a zone is disabled, you cannot change any of the settings for that zone. You cannot disable zone 1.
1 Select **> SETTINGS > ZONE**.
2 Select a zone.
3 Select **ZONE ENABLED** to clear the check box.

**Enabling Volume Control of Zone 3 from a Connected Amplifier**
By default, the volume of zone 3 is controlled by the stereo, but you can control the volume of the zone using the connected amplifier instead.
1 Select **> SETTINGS**.
2 Select zone 3.
3 Select **VOLUME CONTROL** to clear the check box.
The audio signal from the zone is provided to the amplifier as a fixed-line-level output at maximum volume.

**Linking Zones**
You can link zones 1 and 2 to keep the volume levels synchronized. Adjusting the volume of either of the linked zones affects both zones.
1. Select ➕ ➔ > SETTINGS.
2. Select ZONE > ZONE 2 > LINK TO ZONE 1.

**NOTE:** After zones 1 and 2 are linked, you cannot adjust the volume of each zone individually.

### Disabling the Loud Setting for a Zone

The LOUD setting maintains frequency response at low volumes and increases perceived loudness at high volumes. This setting is enabled by default in all zones.

1. Select ➕ ➔ > SETTINGS > ZONE.
2. Select a zone.
3. Select LOUD to clear the check box.

### Adjusting the Tone

1. Select ➕ ➔ > SETTINGS.
2. Select ZONE.
3. Select the zone to adjust.
4. Select TONE.
5. Press the dial to select to a tone.
6. Turn the dial to adjust the level.

### Setting a Zone Name

You can set a name for a speaker zone to make it easier to identify.

1. Select ➕ ➔ > SETTINGS > ZONE.
2. Select a zone.
3. Select ZONE NAME.
4. Use the on-screen keyboard to enter a name, and select ✓.

### Adjusting the Subwoofer Filter

You can use the subwoofer filter setting to control the subwoofer cutoff frequency for each zone, which can enhance the blend of the sound produced by the speakers and the subwoofer. Audio signals above the selected frequency are not passed to the subwoofer.

**NOTE:** If a DSP setting has been applied to zone, this setting cannot be changed on the stereo. You can view the DSP setting for the optimal cutoff frequency as calculated by the DSP controller, but cannot adjust it.

1. Select ➕ ➔ > SETTINGS > ZONE.
2. Select a zone.
3. Select SUB. FREQ.
4. Select a frequency.

### Adjusting Additional Audio Settings for a Zone

1. Select ➕ ➔ > SETTINGS.
2. Select ZONE.
3. Select a zone.
4. Select MORE.
5. Select one or more options:
   - To limit the maximum volume output of this zone, select VOLUME LIMIT, and adjust the level.
   - To set the subwoofer level for this zone, select SUB LEVEL, and adjust the level.
   - To adjust the right and left speaker balance of this zone, select BALANCE, and adjust the balance.

### Power Options

Select ➕ ➔ > SETTINGS > POWER OPTIONS.

- **POWER SAVE:** Disables the LCD backlight after one minute of inactivity to save battery power.
- **STANDBY MODE:** Enables a standby mode instead of turning off the device completely and allows the device to be turned on from a device on the network (*Enabling Standby Mode*, page 3). When enabled, the device turns on much faster, but the device uses more battery when in standby mode than when turned off without standby mode enabled. When enabled, the device turns on much faster when you turn on the ignition or press ✪.

**NRX POWER:** Turns on or off the power the stereo provides to optional NRX series wired remote controls not on a NMEA 2000 network (*Configuring an Optional Wired NRX Remote Control*, page 13).

**SYSTEM OFF:** Sends a signal to turn off on all devices connected to the network.

### Network Settings

Select ➕ ➔ > SETTINGS > NETWORK.

- **DHCP CLIENT:** Sets the device as a DHCP client. This is the default setting for all devices that are not configured to be a DHCP server or wireless access point.

- **STATIC IP:** Allows you to set a static IP address for the device (*Setting a Static IP Address*, page 12).

- **GARMIN MARINE NETWORK:** Allows the device to be used on a Garmin Marine Network so it can be viewed and controlled by connected Garmin chartplotters (*Configuring the Stereo for use with a Garmin Marine Network*, page 11).

- **DETAILS:** Shows information about the network configuration.

- **ADVANCED:** Allows you to configure the DHCP server and reset all network settings for this stereo to the factory default values.

- **SAVE:** Allows you to save changes to the network settings.

### Setting the Stereo as the DHCP Server

If you connected more than two network devices together directly or using a network switch or wireless access point and did not install a router, you should configure only one Fusion PartyBus stereo to be a DHCP server.

**NOTE:** Although the Fusion PartyBus can communicate with each other without a DHCP server on the network, the devices take longer to connect to each other when you first turn them on. It is highly recommended to have a properly-configured DHCP server on the network for the best results.

1. Select ➕ ➔ > SETTINGS > NETWORK > STATIC IP > SAVE.
   - You must set the stereo to use a static IP address before you can set it as a wired DHCP server.

2. Select ADVANCED > DHCP SERVER > DHCP ENABLED > SAVE.
   - You can configure the IP address range of the DHCP server (*DHCP Settings*, page 11).

### DHCP Settings

Select ➕ ➔ > SETTINGS > NETWORK > ADVANCED > DHCP SERVER.

- **DHCP ENABLED:** Sets the device as the DHCP server on the network.
- **START IP:** Sets the first IP address in the IP-address range of the DHCP server.
- **END IP:** Sets the final IP address in the IP-address range of the DHCP server.

### Configuring the Stereo for use with a Garmin Marine Network

You can connect this stereo to a Garmin Marine Network in order to view and control the stereo using a compatible Garmin chartplotter.

**NOTE:** When you configure the stereo for use with a Garmin Marine Network, you are limited to using only Garmin and Fusion devices. You cannot use third-party routers, phones, storage devices, or other network products with this stereo.
Select "Settings > Network > Garmin Marine Network."

**Setting a Static IP Address**

If the stereo is configured as a static IP, it is automatically assigned the IP address of 192.168.0.1. You can change this IP address.

If the stereo is a DHCP client on the network and you do not want the DHCP server to automatically assign an IP address to the stereo, you can set a static IP address.

**NOTE:** Every device on the network must have a unique IP address. If you select a static IP address that is the same as the IP address on the network, the devices will not work properly.

1. Select "Settings > Network > Static IP."
2. Select an option:
   - To set the IP address, select IP, and enter the IP address.
   - To set the subnet mask, select Mask, and enter the subnet mask.
   **NOTE:** The subnet mask must match all other devices on the network to work properly. A typical subnet mask is 255.255.255.0.
   - To set the default gateway IP address, select Gateway, and enter the gateway IP address.
   **NOTE:** The default gateway is typically set as the IP address of the DHCP server on the network.
3. Select Save.

**Resetting Network Settings**

You can reset all network settings for this stereo to the factory default values.

Select "Settings > Network > Reset > Yes.

**Update Options**

Select "Settings > Update."

**NOTICE**

Do not turn off the device or disconnect the power during a software update. Turning off the power during a software update may cause the device to become unresponsive.

**NOTE:**
- You should update the device software using a USB flash drive.
- If the stereo is connected to a wireless network, you can update the software using the Fusion-Link app on a mobile device.
- The device may restart a few times when updating. This is normal.
- You can program only newer versions of software on the device.

**Stereo:** Updates the stereo.

**NRX Remote:** Updates an optional NRX remote connected to the NMEA 2000 port or NMEA 2000 network using a valid software update file on a connected USB flash drive.

**ERX Remote:** Updates an optional remote connected to the ETHERNET port or the Fusion PartyBus network using a valid software update file on a connected USB flash drive.

**DAB Module:** Updates an optional DAB module connected to the SIRIUS XM port using a valid software update file on a connected USB flash drive.

**Factory Reset:** Restores all settings to the factory default values.

**Refresh Network:** Clears discovered stereos from the device and searches for new stereos on the network.

**Additional Stereo Control Options**

**Connecting to a Garmin Watch**

For a list of a compatible Garmin watches, go to www.fusionentertainment.com. For more information about the watch, see the watch manual at www.garmin.com/manuals.

1. Following the instructions in the watch manual, install the Fusion-Link Lite™ app from the Connect IQ™ store onto the watch.
2. On the stereo, select the BT source.
3. Select "Settings > Discoverable."
   The stereo remains discoverable for two minutes.
4. Bring the watch within 3 m (10 ft.) of the stereo.
   **NOTE:** Stay 10 m (33 ft.) away from other ANT® devices while pairing.
5. Open the Fusion-Link Lite app on the watch.
   The first time you open the app on the watch, the watch automatically pairs with and connects to the stereo. If you need to pair to another stereo, in the Fusion-Link Lite app, select Settings > Pair new.
6. Control the audio playback using the Fusion-Link Lite app on the watch.

After the devices are paired, they connect automatically when they are turned on, within range, and the app is open on the watch.

**Connecting to an ARX70 Remote Control**

1. On the stereo, select the BT source.
2. Select "Settings > Discoverable."
3. Bring the ARX70 remote control within 10 m (33 ft.) of the stereo.
   **NOTE:** Stay 10 m (33 ft.) away from other ANT devices while pairing.
4. On the ARX70 remote control, press and hold "tty" until the status LED starts alternating green and red.
   The remote control searches for the stereo. When the remote control pairs successfully, the status LED turns on green briefly and then turns off.

If the remote control cannot pair the stereo, the status LED turns on red briefly and then turns off.

**Fusion-Link Wireless Remote Control App**

You can use the Fusion-Link remote control app on your compatible Apple or Android device to adjust the stereo volume, change the source, control playback, select and manage radio presets, and adjust some stereo settings. You can use the app to set up and configure DSP profiles on the stereo.

The app communicates with the stereo using a wireless connection to the mobile device. You must connect your compatible device to the stereo using Bluetooth technology to use the app.

If the stereo is connected to a network with a Wi-Fi access point, the app can communicate with the stereo using the network for greater range than a Bluetooth connection.

You can connect an Apple device to the stereo using a USB cable to update the stereo software.

For information about the Fusion-Link remote control app for compatible Apple or Android devices, go to the Apple App Store™ or the Google Play™ store.
FUSION-Link™ Network Technology

FUSION-Link network technology allows you to fully control compatible Fusion entertainment systems on compatible multi-function displays installed at the helm, flybridge, or navigation station of the vessel. This provides integrated entertainment control and a less cluttered console.

The partnered multi-function display becomes the portal on which you can control all audio on the vessel, no matter where on the vessel the connected stereo is installed. The FUSION-Link equipped stereo can be installed out of sight if space is an issue and users need to access the stereo only to replace removable media.

FUSION-Link technology on this device can communicate using existing industry-standard network connections including Ethernet and Wi-Fi wireless technology.

FUSION-Link technology offered on this device can communicate using existing industry-standard NMEA 2000 networks.

For a list of FUSION-Link capable products from companies partnered with Fusion, go to www.fusionentertainment.com.

NMEA 2000 Remote Control and Display

The stereo can be controlled by compatible Fusion wired remote controls installed in the audio zones throughout the vessel. Operating the entertainment system from the remote control is similar to operating it from the main stereo.

Fusion wired remote controls operate over an existing NMEA 2000 network, so wiring the remote controls directly to the stereo is not necessary. All remote controls connected to the same NMEA 2000 network as the stereo can control the stereo.

If your vessel does not have a NMEA 2000 network, you can directly connect a single Fusion remote control or create a Fusion remote control network to connect multiple Fusion wired remote controls directly to the NMEA 2000 connector on the stereo. See the installation instructions provided with your stereo and remote for more information.

The Fusion wired remote control can also serve as an NMEA display showing NMEA navigation data or vessel performance data from other NMEA devices on an existing NMEA 2000 network. See the instructions provided with your remote control for information on supported NMEA 2000 PGN information.

Configuring an Optional Wired NRX Remote Control

NOTICE

The stereo is configured by default to work with a NMEA 2000 network, and the NRX POWER option should be enabled only when an optional wired NRX remote control is connected directly to the stereo. Enabling this option when the stereo is connected to a NMEA 2000 network may damage other devices on the NMEA 2000 network.

If you connect an optional wired NRX remote control directly to the stereo, and not through a NMEA 2000 network, additional configuration is needed.

1. Select > SETTINGS > POWER OPTIONS.
2. Select an option:
   • If you connected both your stereo and your optional wired remote to a NMEA 2000 network, make sure the NRX POWER option is not selected. This enables the optional remote to receive power from the NMEA 2000 network.
   • If you connected the optional wired remote directly to the stereo through the NMEA 2000 connector, select the NRX POWER option. This enables the stereo to supply power to the optional remote.

NMEA 2000 Information

NMEA 2000 is the most popular marine standard for data communication within vessels. It has become the standard for sending navigation and engine management data within vessels. Fusion introduces an industry-first product by incorporating NMEA 2000 functionality in its audio remote control devices. This enables the user to monitor a series of NMEA sentences available over the NMEA 2000 network on a connected remote control.

Go to www.fusionentertainment.com for a full list of supported NMEA sentences.

Appendix

Registering Your Apollo RA670

Help us better support you by completing our online registration today.

• Go to www.fusionentertainment.com.
• Keep the original sales receipt, or a photocopy, in a safe place.

Cleaning the Device

1. Dampen a soft, clean, lint-free cloth with fresh water.
2. Gently wipe the device.

Software Updates

For best results, you should update the software in all Fusion devices at the time of installation to ensure compatibility.

You can update the software using a USB flash drive not formatted to the NTFS file system. For software updates and instructions on updating the device using the USB flash drive, go to the device product page at www.fusionentertainment.com.

If the stereo is connected to a Fusion PartyBus network with a Wi-Fi router, you can also update the software using the Fusion-Link remote control app on your compatible Apple or Android device. To download the app and update the device software, go to the Apple App Store or the Google Play store.

Troubleshooting

The stereo does not respond to key presses

• Hold ¯ until the stereo turns off, and turn it on again to reset the stereo.
• Disconnect power to the stereo for two minutes to reset the stereo.

My Bluetooth audio is interrupted by short breaks

• Ensure the media player is not covered or obstructed.
• Bluetooth technology performs best with line-of-sight operation.
• Bring the media player within 10 m (33 ft.) of the stereo.
• Turn off the DISCOVERABLE setting after pairing a Bluetooth device to the stereo.

The stereo does not display all song information from my Bluetooth source

The availability of song information such as song title, artist name, track duration, and album cover artwork depends on the capability of the media player and music application.

Network Troubleshooting

If you cannot see or connect to Fusion PartyBus devices on the network, check the following:

• Verify that only one device, either a stereo or a router, is configured as a DHCP server.
• Verify that all Fusion PartyBus devices, network switches, routers, and wireless access points are connected to the network and turned on.
• Verify that wireless Fusion PartyBus devices are connected to a wireless router or wireless access point on the network.

**NOTE:** Wired connections are more reliable than wireless connections. If possible, you should connect devices to the network using an Ethernet cable.

• You may experience wireless interference if there are many nearby wireless access points. Change the channel on your router or wireless access point to test for and correct interference.
• Connecting a Bluetooth device to a stereo configured as a wireless access point or client may reduce wireless performance. Disconnect Bluetooth devices to test for and correct interference.
• If you configured static IP addresses, verify that every device has a unique IP address, that the first three sets of numbers in the IP addresses match, and that the subnet masks on every device are identical.
• If you have made configuration changes that might be causing networking issues, reset all network settings to the factory default values.

**Network Status Icons**

A network-status icon is shown on some screens of the stereo. You can refer to this table to understand the appearance of the icon and help diagnose issues with the Fusion PartyBus network.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1.png" alt="Icon 1" /></td>
<td>The stereo is configured for a wired network connection and connected to a wired network using an Ethernet cable.</td>
</tr>
<tr>
<td><img src="image2.png" alt="Icon 2" /></td>
<td>The stereo is configured for a wired network connection, but cannot detect the wired network. An Ethernet cable may not be connected or there may be other problems with the network.</td>
</tr>
</tbody>
</table>

The stereo keeps locking up when connected to an Apple device

• Press and hold the power button to reset the stereo.
• Reset the Apple device. Go to [www.apple.com](http://www.apple.com) for more information.
• Make sure you have the latest version of iTunes® and the latest operating software on your Apple device.

The stereo is not finding my connected Apple device

• Make sure your Apple device supports Interface Accessory Protocol 2 (iAP2). This stereo is not compatible with iAP1 devices.
• Make sure you have the latest version of iTunes and the latest operating software on your Apple device.
• Make sure you have the latest version of the Fusion-Link application on your Apple device.
• Reset the Apple device.

Go to [www.apple.com](http://www.apple.com) for more information.

• Contact your Fusion dealer or send an email to Fusion from [www.fusionentertainment.com](http://www.fusionentertainment.com).

My Apple AirPlay audio is interrupted by short breaks

• Make sure the Apple device is not covered or obstructed.
• Make sure the Apple device has a good connection to the same Wi-Fi network as the stereo.
• Make sure the Apple device is not connected to the stereo using Bluetooth technology and Wi-Fi.

Using both a Bluetooth and a Wi-Fi connection may cause playback interruptions.

**Stereo Dimension Drawings**

**Side Dimensions**

---

¹ The device withstands incidental exposure to water of up to 1 m for up to 30 min, and is protected against powerful jets of water. For more information, go to [www.garmin.com/waterrating](http://www.garmin.com/waterrating).

² The stereo may limit the output power to prevent the amplifier from overheating, and to maintain the audio dynamics.
