OVERVIEW
The MS-BT200 Bluetooth module is designed to provide Bluetooth audio streaming from a compatible smartphone or media player directly to your Fusion marine stereo. The MS-BT200 is connected to the Satellite Radio connector of your stereo.

The MS-BT200 supports audio streaming and control (Play/Pause/Next) backs of the media devices from the Fusion stereo. Display of song information is also supported when available. Whether you have an iPhone, Android, Blackberry or Windows smartphone you can stream your favorite tracks while you are on the move or through Fusion’s superior marine entertainment Indonesia and speakers.

The MS-BT200 does not provide phone call control. Hand free operation of the phone is not supported by the Fusion stereo.

A lip-syncing cable is provided to allow an optimal mounting position to maximize the Bluetooth range.

INSTALLATION

MOUNTING THE MS-BT200
FUSION recommends that the MS-BT200 be mounted in an elevated position as far away from metal work as possible. This will ensure maximum range for Bluetooth audio streaming.

Any barrier between the MS-BT200 and your streaming device will reduce the range. Line-of-site reception will provide the best performance.

The MS-BT200 can be secured by either using the adhesive pad or by using a screw, snap, bolt, or hooking, non-corrosive screw. Please ensure that the mounting surface is flat, clean and dry prior to applying the adhesive backing tape. The surface can be cleaned with an alcohol wipe.

When mounting using the screw holes, ensure that the surface is flat and tightening the screw does not distort the case.

SATellite CONNECTor
When I play music on my smartphone there is no audio output through the marine head unit.

- Ensure that you have paired with the MS-BT200 (please refer to your smartphone or media player user manual).
- Ensure that your smartphone’s music player is configured to play music over Bluetooth.
- Ensure that the marine head unit is powered on and the Bluetooth input source is selected.
- Ensure the MS-BT200 is connected to the Satellite Radio connector as per the installation instructions.

1. The name of the MS-BT200 in discovery (pairing) mode is the same name given to your FUSION Stereo. The default name is the stereo Product Name e.g. "MS-700".

- Ensure that the marine head unit and MS-BT200 are powered on.
- Ensure the MS-BT200 is connected to the Satellite Radio connector as per the installation instructions.
- Ensure the Satellite Radio port is configured for Bluetooth operation. Bluetooth operation is selected in the Source page of the Settings menu.

Can’t select Bluetooth Source

- Check MS-BT200 cable connection
- Check if a USB connection is enabled in the Source page of the Settings menu.
